

Dear delegates,

on behalf of the people's republic of Hornstull, we would like you - the UN-representatives of the people of Bermuda - to take a minute and consider our suggestions for CCS (Carbon Capture and Storage).

As the negotiations during COP14 has turned out we think that everyone can agree on the fact that CCS will be considered one of the mitigation keystones in the post-Kyoto regime. We think it's really good to invest so much hope and faith in a system that we have no technical means to construct, and have no idea if it'll ever work.

We, the representatives of the Planka.nu party in PRH, would like to present to you our new project, tentatively titled "BTCSSR(r)" (The Revolutionary Bermuda Triangle Carbon Capture and Storage Regime). Our idea is to divide the Bermuda triangle into small sectors, and then hand them out unevenly to all countries in the UN. Then everyone can just sink their emissions into their part of the Bermuda triangle. And here's the really smart hing about BTCSSR(r): if one country doesn't use the whole of their part of the Bermuda triangle, they can then - within a system we call the BTCSSR(r)TTS (The Revolutionary Bermuda Triangle Carbon Capture and Storage Regime Triangle Trading System) - sell a part of their part of the Bermuda triangle to another country who has used up their whole part of the Bermuda triangle.

What do you think?

Please contact us at: sthlm@planka.nu or 0046739457169

Take care, and say hello to Marky Mark!

with Love // Planka.nu
